PAINLESS ROOT CANAL PROCEDURE

“NO PAIN,
NO PROBLEM”

"DO ANY OF THESE SYMPTOMS RING A BELL?"

Hot and Cold Sensitive

Swollen Gums

Dental abscess

Immense pain in dental roots while chewing food

THESE ARE SIGNS INDICATING THAT YOU WILL NEED A ROOT CANAL.

WHAT IS THE ROOT CANAL?

Root canal is done to fix and save a tooth that is seriously rotted or becomes tainted. During this process, the nerve and pulp are removed from the insides of the tooth, and then cleaned and sealed. Without treatment, the tissue encompassing the tooth will become contaminated and abscesses might form. In order to avoid such complexities in your mouth and in your life, opt for Oraliah dental care and experience a painless root canal procedure.

Root canal was considered a very painful procedure that includes deep cleaning of canals or the inner chamber of the root. This procedure sometimes included irritation to the surrounding gums and nerves and therefore, most of the time, laymen did not consider it a solution to their deep-rooted dental issues.

The temporary solution of avoiding pain ultimately results in permanent tooth cracking, swelling of gums, and extreme pain, thereby resulting in the need for a dental crown.

Thanks to innovation in dental technology, we can now assure that root canals aren't as painful as they sound anymore.

Oraliah brings painless solutions for root canal procedures as we believe that "Everyone should have access to high dental care". Besides this, we offer:

Israeli High tech Dental Solutions

International Treatment Standards

Advanced sensor and X-ray machine

ISO-certified sterilization machine with water quality sensor

Electronic Medical Records for patient history

UV Chamber for storage of sterilized dental equipment

Latest digital imaging plate system called RIO Scan

State of the Art equipment

"WITH PROPER PAIN MANAGEMENT, THERE IS NO NEED TO FEAR THE DENTIST"
