

## Overcome your Illusion of Fear by Opting Oraliah and their Painless Treatment Options.

Oraliah offers painless treatment management because just like you, we know how frightening the fear of a toothache is. The only solution is to face your fears. Moreover, we have the latest tips and tricks up our sleeves to ensure our patients do overcome their fear in a painless sitting.

## What do we do to manage pain?

- Unique treatment methodologies
- Use new technologies
- Create individualized treatment plans
- You'll be too distracted to think about pain

During and post the COVID19 pandemic, we all started valuing life more than ever and started taking care of ourselves. We started loving ourselves a little more than we did before. Why not pledge ourselves to continue to take care of our dental health and ensure a healthy smile for the rest of our lives?

## THE ABILITY TO SMILE WITH CONFIDENCE CAN CHANGE LIVES

The whole world is fighting the COVID19 pandemic by ensuring vaccination protocols and maintaining high hygiene standards. Lockdown imposition is removed from many regions and people are getting back to business. However, the World Health Organization has implemented certain stringent regulations so as to restrict the contamination of coronavirus and save more lives.

## HOW DO WE MANAGE

Besides corporate offices, and public places, hospitals, healthcare centers, and clinics are required to follow certain stringent COVID19 protocols. These include:

Educate staff about the disease and ask them to maintain social distance in and around the office premises.

Implement alternative office management plans that can be implemented to minimize the chances of exposure to respiratory pathogens.

Use of hand sanitizers, surgical masks, gloves, and regular sanitization of office premises.

No-touch methods should be used to dispose of any medical, pharmaceutical, skin penetration, dental, nursing, and other clinical activity waste products, amalgam waste, silver, mercury, bloody gauze, sterilized disinfectants, chemicals, and other dental waste.

N95 respirators, face shields/ goggles, surgical masks, and gowns for providers and staff, as appropriate

Alcohol-based hand rub for reception, waiting, patient care, and restroom areas. Use of single-use gloves
