

Do you have crooked teeth?

Orthodontists are dental specialists trained to prevent, diagnose, and treat dental and facial irregularities. The key reason to visit an orthodontist is to treat malocclusion, or a "bad bite." We at Oraliah provide a wide range of treatment options to straighten crooked teeth, fix bad bites and align the jaws correctly. We offer the best deals for you and your family so your smile is protected under pocket-friendly packages such as:

Individual

This is designed for an individual person (check ups, extraction, fillings, etc.)

Family

Protect your family from any dental concerns and pain

Friend circle

Ensure the dental needs of your friends and colleagues are covered

SMILE DESIGN CROWN AND ORTHODONTICS

Dentistry has developed from a curative to an innovative science in an extremely limited ability to focus time. Aesthetic dentistry emerged as one of the most rewarding, moderate, and challenging sectors of this field. Smile Design is recommended for people with discolored, protruded or crooked teeth, darkened gums, chipped teeth, or for people who want to thicken or enhance their lips.

NO FROWN WITH DENTAL CROWN

Dental crowns help to permanently cover a tooth that has decayed or been broken or to hold together a cracked tooth. Crowning is recommended for the back tooth and includes products such as metal, ceramic, resin, and porcelain. The most popular dental crowning material choices includes a mixture of metal and porcelain.

WHY DO YOU NEED DENTAL CROWN?

- To protect a weak tooth from decaying
- To cover or support a tooth with large filling
- To restore an already broken tooth
- To hold a dental bridge in place

Why should you visit an orthodontist?

Very often we associate a visit to the dentist with great pain and discomfort on the one side and expensive treatment procedures leaving you confused. The key reasons why you should never skip a visit to your orthodontist are:

- Crooked teeth alignment can result in high risk of gum disease and cavity
- Improperly spaced teeth may lead to cavity development
- Misalignment problems may ultimately lead to gum diseases

Oraliah's well-equipped and sophisticated clinical setups in Sahakarnagar, Bangalore will not only help you align your jaws but also protect your teeth and gums.
